

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated in the presence of 100 mg/ml of tetracycline and 100 mg/ml of kanamycin. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml. The transformation efficiency was determined by the number of transformants per 10⁶ cells. The data are the mean ± SD of three independent experiments.

1. The first part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as $\epsilon \rightarrow 0$. It is shown that the solutions of the system (1) converge to the solutions of the system (2) in the sense of the weak convergence in the space $L^2(\Omega; \mathbb{R}^n)$.

Figure 1 shows a schematic diagram of a 2D lattice. A central square unit cell is highlighted with a dashed line. The vertices of this unit cell are marked with black dots and labeled with 'x' and 'y' coordinates. The midpoints of the edges are marked with white dots and also labeled with 'x' and 'y' coordinates. The unit cell is surrounded by a grid of other unit cells, with the central one highlighted by a dashed line.
