For the purpose of this study, the following hypotheses were formulated:

the 1990s, the number of people in the world who are illiterate has increased from 1.2 billion to 1.5 billion. The number of illiterate people in the world is expected to reach 1.7 billion by the year 2015. The number of illiterate people in the world is expected to reach 1.7 billion by the year 2015. The number of illiterate people in the world is expected to reach 1.7 billion by the year 2015.

Abstract: The purpose of this study was to determine the effect of a 12-week training program on the heart rate variability (HRV) of young adults. The study was conducted in a laboratory setting. The participants were 20 young adults (10 males and 10 females) who were randomly assigned to two groups: a control group and an experimental group. The control group did not receive any training, while the experimental group received a 12-week training program. The HRV was measured at baseline and at the end of the 12-week training program. The results showed that the experimental group had a significant increase in HRV compared to the control group. The increase in HRV was observed in all parameters measured, including heart rate, standard deviation of normal-to-normal intervals (SDNN), and root mean square of successive differences (RMSSD). The findings suggest that a 12-week training program can improve HRV in young adults.

1. ANTECEDENTES

El presente documento tiene como finalidad informar a la comunidad sobre el proceso de elaboración del Plan de Ordenamiento Territorial (POT) del Cantón Manta, en el marco del proceso de descentralización y desarrollo urbano sostenible. El POT es un instrumento de planificación que define la estructura espacial del territorio, estableciendo las normas y condiciones para el uso del suelo, la ocupación del territorio y la gestión urbana.

El POT se elabora en el marco del Plan de Desarrollo Urbano (PDU) del Cantón Manta, el cual define la visión y las estrategias de desarrollo urbano para el periodo 2015-2025. El POT es un instrumento de planificación que define la estructura espacial del territorio, estableciendo las normas y condiciones para el uso del suelo, la ocupación del territorio y la gestión urbana.
